- Time management
- Teamwork
- Persistence
- Self improvement

PERSONAL PROFILE

I'm interested in web app development and love picking up new skills regularly. I'm excited about teaming up with someone experienced. I am ready to learn from my team members to continuously improve myself.

EXPERIENCE

junior software developer programme cohort 5

Generation Thailand

Aug 2023 – Oct 2023

I am currently enrolled in the Generation Thailand, where I expressed a keen interest in software development for the organization. I have experience building web apps using HTML, CSS, and various programming languages. In addition to my web development skills, I gained exposure to coding with Arduino during my studies. I am enthusiastic about acquiring and developing skills that will contribute to the organization's goals

Final Project: Keepfit (Exercise Tracking Web Application)

- This web application is designed for the elderly group. It allows users to easily track their exercise results. The web application is user-friendly and can display past exercise results to users.
- **Technology Stack:** This web application uses the MERN stack, which includes MongoDB, ExpressJS, ReactJS, and Node.js.
- **Contributions:** I was involved in designing the UX/UI and feature systems within the web application. I was responsible for implementing the login and signup system. I also ensured that assigned tasks were completed within the specified time frame.
- These adjustments provide a clearer structure to your text, making it more informative and easier to understand.

Side projects

Portfolio React

Oct 2023

- I have create static portfolio website using React and Tailwind CSS. This website reflects my skills and showcases various mini-projects, offering a comprehensive overview of my capabilities.

Create resume

Nov 2022 – Jan 2023

- Crafted a responsive resume using HTML and CSS, featuring a practical dark mode for improved usability. This project showcases my web development skills with a focus on simplicity and functionality.

Create application (final project in university)

Nov 2021 – Feb 2022

- Designed the UX/UI of the application and was responsible for designing the login system and the subscription system using the Flutter language. This involved creating an application which will store user data on firebase (about 2 years ago)
